

ABSTRACT

The invention is an animal carrier product for carrying an animal on a cycle. The product is mounted to the cycle at a saddlebag position to provide a low center of gravity while the cycle is in use. The product is mounted at the saddlebag position to
5 enable the cycle to carry a human passenger in a typical passenger position behind a cycle driver. Some embodiments of the product are configured to mount interchangeably with a commercially-available saddlebag cargo container, utilizing the mounting bracket provided with the commercially-available saddlebag cargo container.
